SIT120 Reflections

WEEK 1

On the first week, I was warmly welcomed and introduced to the SIT120 – Introduction to Responsive Web Applications unit. The tutors gave me a thorough overview of the unit, along with comprehensive explanations regarding the graduate learning outcomes, unit learning outcomes and the summative assessments – just to name a few. I also learnt the basics of CSS (Cascading Style Sheet) and JavaScript, whilst strengthening my knowledge of HTML through the practical tasks given. Apart from the programming languages, I was also introduced to two online code-sharing tool that allows me to test my code, which are JSFiddle and CodePen. Vue.js; a library for building responsive web interfaces, was also introduced, however I was not able to do much with it because I was confused. With that being said, I am looking forward to what the unit has to offer on week 2. Cheers!
